Immigration Approach Preference

When it comes to the issue of immigration, which statement do you agree with more?

	Total	Age				Gender		Education		Ancestry		
		18-34	35-49	50-64	65+	Man	Woman	Less than college	College	Mexico	Other	Not Hispanic
We should prioritize border security first and focus on immigration reform much later when we have fully solved the crisis of migrants at the U.S.-Mexico border, even if that means leaving millions of undocumented immigrants at risk of deportation	34%	32%	27%	38%	43%	37%	31%	33%	35%	31%	42%	—
The immigration system is fully broken — we need to work on both border security and reform for undocumented immigrants who have been in the US for many years who can pass a background check to earn a pathway to citizenship	58%	60%	62%	56%	51%	57%	59%	59%	57%	63%	44%	—
Not sure	8%	8%	12%	6%	6%	6%	10%	8%	9%	7%	13%	—

Racial Profiling Worry

Compared to the past few years, do you feel [more or less] worried that law enforcement will stop or detain you due to your skin color or the way you look?

N+ Univision Texas Poll – Latino OS

Online sample of 564 Texas Latino voters fielded from August 27 to September 04, 2026.

Margin of error: +/-5%.

This survey is based on 564 interviews conducted by YouGov on the internet of registered Latino voters in Texas. The sample was weighted according to gender, age, education, and state region based on voter registration lists, the U.S. Census American Community Survey, and the U.S. Census Current Population Survey, as well as 2020 Presidential vote and approximate 2024 Presidential vote based on available results. Respondents were selected by YouGov to be representative of registered Latino voters in Texas. The weights range from 0.16 to 4.42 with a mean of 1 and a standard deviation of 0.68.

The margin of error (a 95% confidence interval) for a sample percentage p based upon the subsetting sample is approximately 5%. It is calculated using the formula:

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
